- **Innovative:** We at Nature Windows give our best to cater to the need of the consumer in the best possible manner.

## EVOLUTION OF DOORS AND WINDOWS EVOLUTION OF THINKING.

In the ancient times a door, a window was just a passage way to move from the shelter to the outside world. With the ongoing evolution, thinking of people changed and windows and doors were created to perform certain functions like ventilation, entering of sunlight and few more. In today's world people like architect, builders, window consultants, fabricators, even the end user has high expectations from windows and doors. Besides its basic features of water tightness and air tightness an intensive research and development process is carried where the air pressure is measured so that there is maximum wind resistance, various methods are tried to cut down unnecessary noise so that you can have a peaceful living, various tests are conducted like fire resistance, anti burglary so that there is no compromise over your security and of course windows are designed to match your aesthetic requirement.

Reynaers & Kanushree creations Jaipur private Limited has join hands together. Reynaers is the Technology partner of Kanushree creations Jaipur private Limited for ALUMINIUM windows & doors.

Reynaers Aluminium is the leading European provider of innovative and sustainable architectural aluminium solutions with a wide variety of windows, doors, curtain walling, sliding systems, conservatories, skylights, sun screening which also incorporate blinds and ventilation grids. Headquartered at Duffel, Belgium since 1965; Reynaers is a global aluminium systems company with offices in over 30 countries and exports to more than 60 countries across 5 continents. Besides offering an extensive range of standard solutions, the company also develops customized solutions that are tailored to the individual customer or project. Research, product development and testing conducted at the Reynaers Institute. Duffel is the sector's largest private innovation and testing centre.

# TECHNOLOGY PARTNERS

## UPVC WINDOW

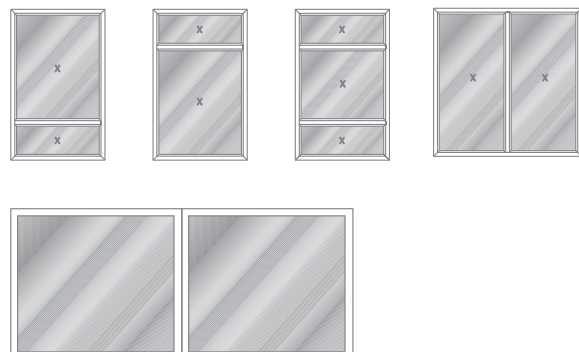

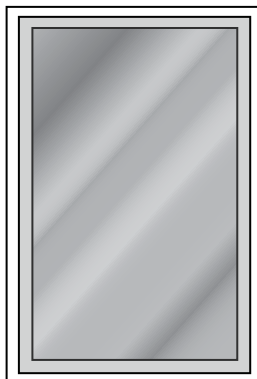

### CASEMENT WINDOWS

The Casement windows open inwards or outwards with help of a sash that is fixed on out frame. Casement windows give you a wide opening which is up to 90 %. Nature Windows offers a wide range of designs depending upon the size, wind load, insulation and design requirement

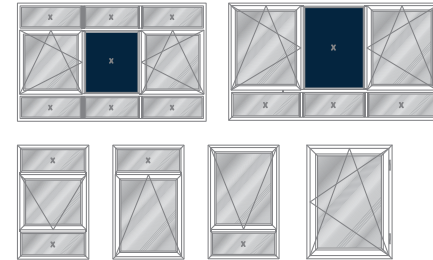

### FIXED WINDOWS

A window that cannot be open, still gives you a bright view of the outside world. Nature Windows provides you various options in that also. Fixed windows are recommended where light or vision or insulation are alone the need, for ventilation purpose the mesh can be provided.

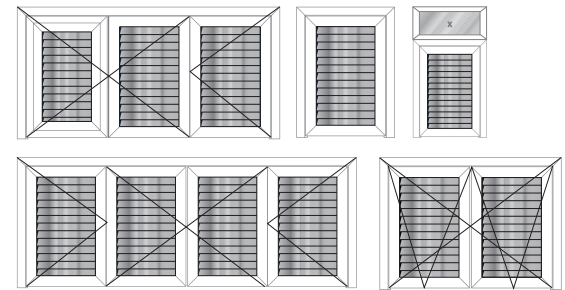

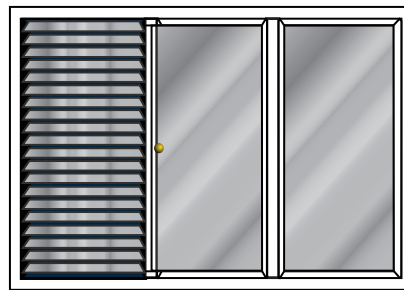

## AWNING WINDOWS

An Awning window is a casement window that is hung horizontally, hinged on top, so that it swings outward like an awning. Emilie Poisson designed this window

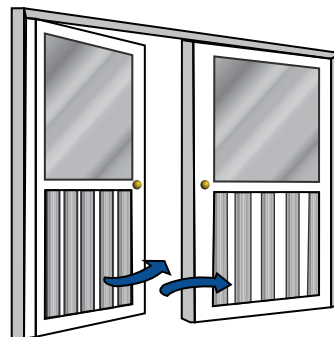

## LOUVERS WINDOWS

Louver windows is a window blind or shutter with horizontal slats that are angled to admit light and air, but to keep out rain, direct sunshine, and noise. The angle of the slats may be adjustable, usually in blinds and windows, or fixed.

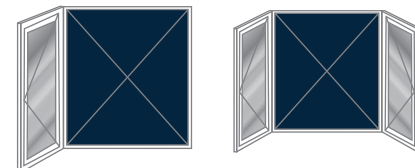

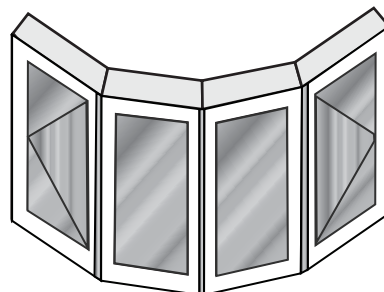

## FRENCH WINDOWS

French window is with more than one sash. French windows are customized, and can fit any opening.

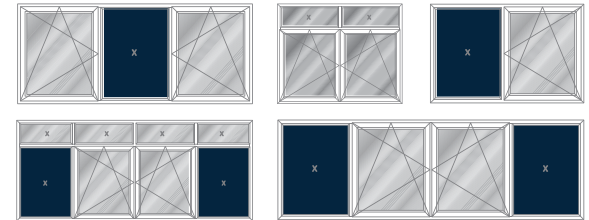

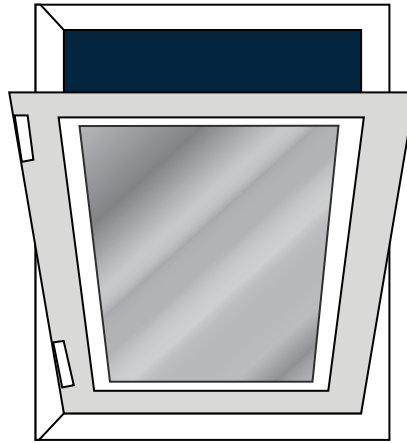

## BAY WINDOWS

Bay window is combination of two or more casement windows at an angle, joined together with bay poles. Any sash of the window can open or can even remain fix. Nature windows offer an exclusive range of bay windows depending on the requirement.

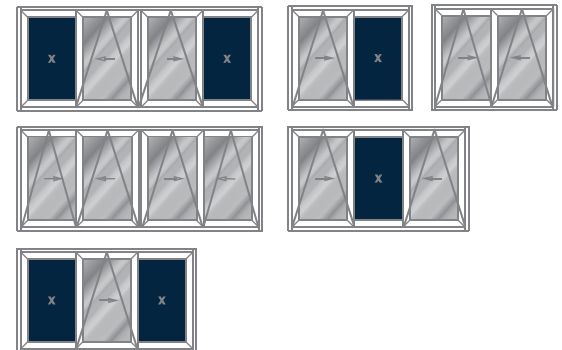

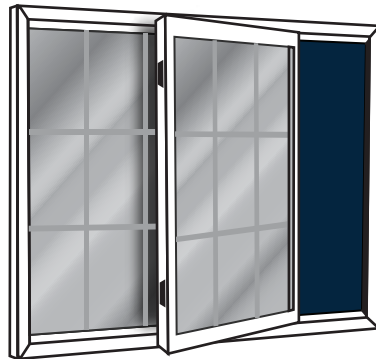

## TILT AND TURN WINDOWS

Tilt and turn windows can tilt at an angle from the top or open like a casement sideways. The tilt position is for ventilation. Both the operations take place with the single handle. These windows provides the feature of having passage way and if you just want to use it for ventilation you have that option as well.

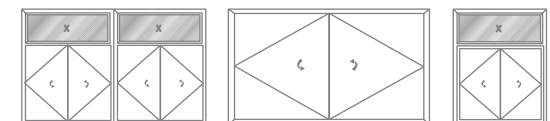

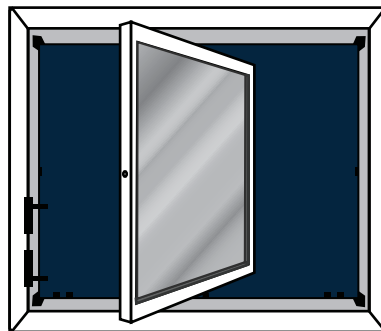

## TILT AND SLIDE WINDOWS

Tilt & Slide windows and doors are a space saving solution. Tilt & Slide window or door can be tilted inwards for ventilation. To fully open your window or door all you have to do is slide it to the side. Both the operations are performed by using a single handle.

## PIVOT WINDOWS

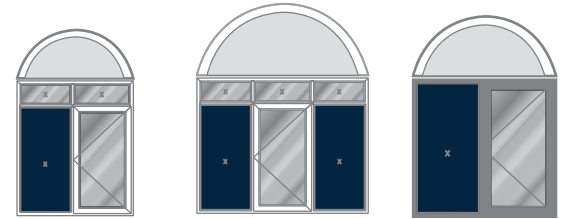

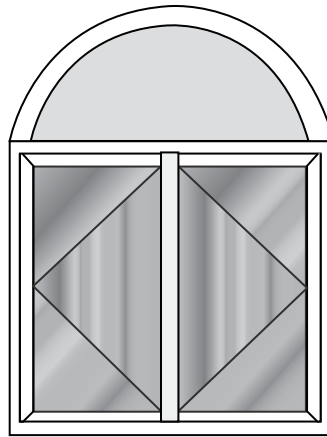

The Pivot window is ideal for ventilating large openings with unobstructed views. The sash brake locks the window at the desired opening angle, and can be disengaged to pivot a full 180 degrees for easy cleaning from the inside.

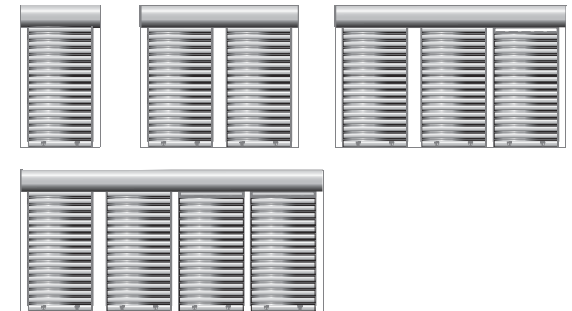

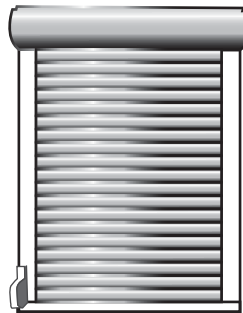

## ARCHED WINDOWS

Arched windows are windows having a curved head from the top. It gives a very royal look to your living

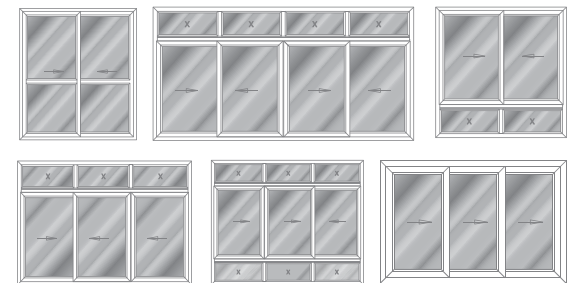

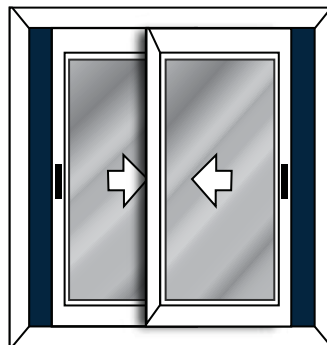

## ROLLER SHUTTERS

A Roller Shutter, roller door or sectional overhead door is a type of door or window shutter consisting of many horizontal slats hinged together.

## SLIDING WINDOWS

The Sliding window is made up of two or more shahs that slide horizontally to the left or right on tracks. The sliding window can be made wider and taller with the addition of sashes. The sliders works on a ride over mechanism. The track on which the sash slides is raised slightly above the ground, preventing dust from settling in the track. The dust-free track ensures a far more smoother sliding motion when compared to conventional sliders. Nature Windows offers a complete range of sliding windows depending upon the size, wind load, insulation and design requirements.

## UPVC DOORS

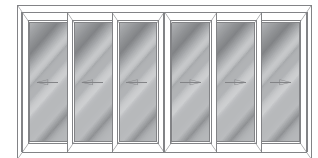

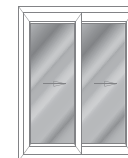

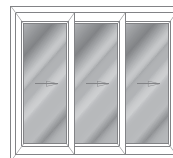

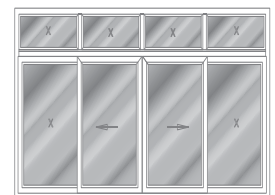

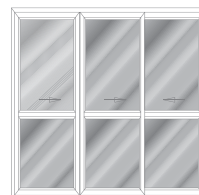

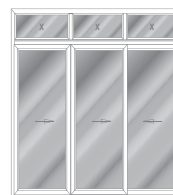

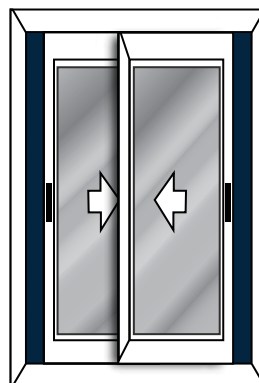

### CASEMENT DOORS

The Casement doors open inwards or outwards with help of a sash that is fixed on out frame. Casement doors give you a wide opening which is up to 90%. Nature Windows offers a wide range designs depending upon the size, wind load, insulation and design requirements.

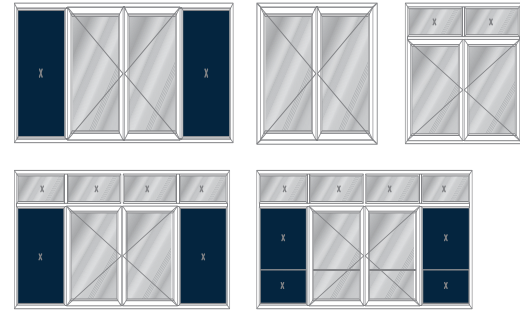

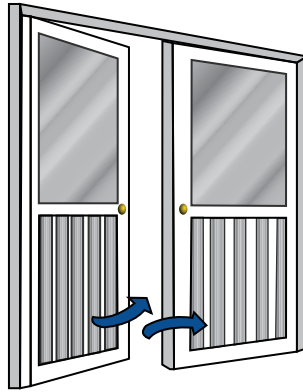

### SLIDING DOORS

The Sliding door is made up of two or more shahs that slide horizontally to the left or right on tracks. The sliding door can be made wider and taller with the addition of sashes. The sliders works on a ride over mechanism.

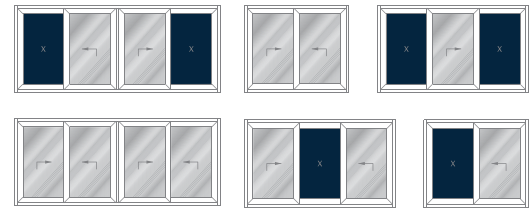

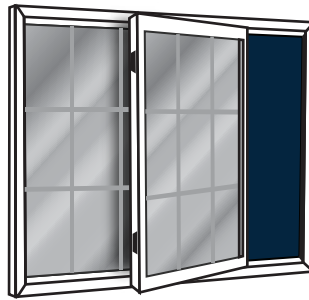

## FRENCH DOORS

French Door is with more than one sash. Typically it is referred as big window which serves as a doors. French doors are custom-sized and can fit any opening.

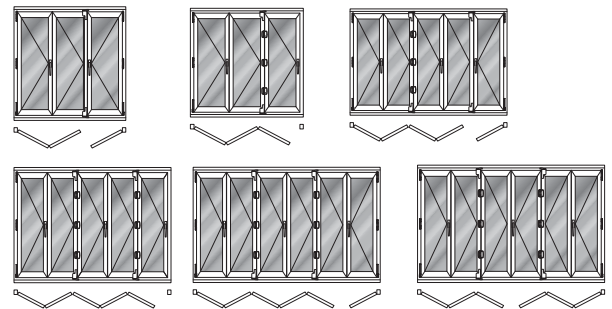

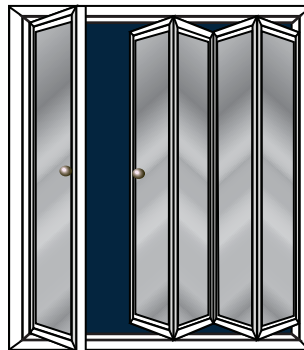

## LIFT AND SLIDE DOORS

Lift and Slide windows and doors are popular choice for opening large expanses. A system of lever and wheels lift the panel off the sill enabling the movement of large, heavy panels with very little efforts.

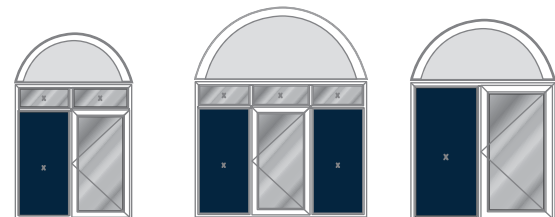

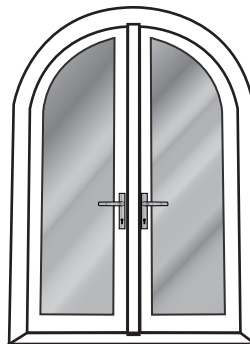

## SLIDE AND FOLD DOORS

Bringing outdoors inside. This unique system of slide and fold doors delivers tremendous flexibility for large scale opening. Each door can be specified to Slide and fold. A single door on one end of the group can be used as a standard hinged door.

## ARCHED DOORS

Arched doors are doors having a curved head from the top. It gives a very royal look to your living.

## TECHNOLOGY PARTNER

Reynaers Aluminium is a leading European specialist in the development and marketing of innovative and sustainable aluminium solutions for windows, doors, curtain walls, sliding systems, sun screening and conservatories. Driven by energy-efficiency and the willingness to take responsibility for the environment.

# GLASS

Glass is an important component that impact the functionality of the window. Glass should be selected on the basis of thermal insulation, sound insulation, wind resistance, water tightness required as per climatic condition and few other points. Nature Windows can accommodate any type of glass as desired and required by you.

## THE VARIOUS TYPES OF GLASS ARE:

- **Float / Annealed Glass:** Float glass is a sheet of glass made by floating molten glass on a bed of molten metal, typically tin. This method gives the sheet uniform thickness and very flat surfaces. Modern windows are made from float glass.
- **Tinted float / Annealed Glass:** Tinted float glass is produced by adding colorant during a clear float production. These glasses are primarily designed for solar control which is reduction of the sun’s direct heat energy, which in turn will reduce the energy cost. Glare reduction is one of the important feature of tinted glass.
- **Reflective Float Glass:** These are float glass with metallic costing which helps reflect back the solar radiation thus taking care of thermal insulation better than tinted glass. It even reflects the light during the day time and it even ensures minimum visibility from the outside.
- **Toughened Glass / Tempered Glass:** Toughened glass is made from annealed glass via a thermal tempering process. The glass is placed on to a roller table, taking it through a furnace that heats it above its annealing point of about 720°C. The glass is then rapidly cooled with forced air drafts while the inner portion remains free to flow for a short time. It is a type of safety glass processed by controlled thermal or chemical treatments to increase its strength compared with normal glass. Tempering puts the outer surfaces into compression and the inner part is in tension.
- **Laminated / Shutter proof / Sandwich Glass:** When two glass sheets of any of the above mentioned glasses are sandwiched together with one or more layers of PVB plastic or resin it is called laminated glass . The process of sandwiching / lamination makes the glass much stronger and prevents easy breakage. Due to PVB Plastic or resin in between the glass does not shatter when it breaks.

GLASS TYPE	FUNCTIONALITY			
	Sound Insulation	Heat Insulation	Light	Safety
Float	√	√	√√√√	√
Tinted	√	√√	√√	√
Reflective	√	√√	√√	√
Toughened	√	√	√√√√	√√
Double Glazed Normal	√√	√√√	√√√√	√
Double Glazed Toughened	√√	√√√	√√√√	√√√√
Triple Glazed Normal	√√	√√√	√√√√	√√

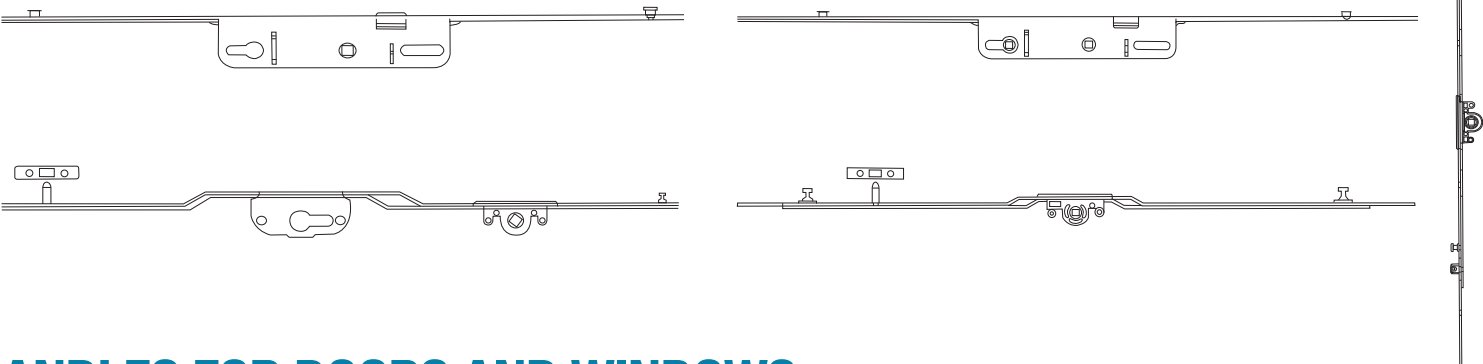

**Note:** The ticks are not mathematical in nature, just an indication of effectiveness. Four ticks do not necessarily mean twice as effective as two ticks.

# MESH

Nature Windows Sliding Flyscreen System is composed of the sash profile, the transom profiles and two different types of rail profile. The big rail (38mm) is used for double rail frame and the small rail (22mm) is used for single rail frame. Sliding Flyscreen System absolutely prevents the entry of flies and other insects with double brush application in compliance with the production details.

It is the only Sliding Flyscreen System with the possibility to be laminated completely. It may be laminated with the same color as the opening; therefore, it provides a visual integrity.

# SERVICES

## SERVICES FOR QUOTATION AND RECOMMENDED DESIGNS

We at Nature windows respect your time and understand how important every second is. Considering this, we provide you the quote in just 2 hours taking in mind all the points mentioned by you, we deliver you what you need. With the help of our team, we at Nature Windows even recommend what type of window will suit were. While recommending we consider various points such as wind pressure, height of the building, thermal insulation, shape preferred and few other points which help us to recommend you the best possible option.

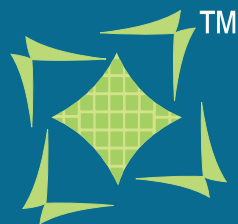

## INSTALLATION

Time and quality service are two things which can never be compromised at Nature Windows. We set a target date with our customers, once we are through with the production our team comprising of couple of supervisors and trained staff reaches the site and the installation process is carried on. Installation being a very crucial part it is done with utmost concentration. The process of insulation is crucial because if the installation is not done properly then the properties of the windows will not be up to the mark.

## AFTER SALE SERVICE

Once you have join hands with Nature Windows we consider you as a member. We keep you updated with all our activities through various different possible modes of communication. After the installation process a member from the team contacts you to know if you are facing any problem. With the warranty facility we have, we are always there at your door step to solve the problem.
